

UNITED WAY BUILDING

Albuquerque, New Mexico

Electrical/Emergency Response

CHALLENGE

Building Interests Inc contacted FSG over a weekend stating that they lost power to the three-story United Way Central New Mexico building, one of the properties they manage. They needed an emergency response from FSG to get back up and running.

SOLUTION

FSG techs promptly arrived on-site to find the electrical switchgear damaged due to water on the upper floor. While FSG engineered and installed the new switchgear and made other necessary repairs to get the customer back up and running, we set up temporary power to the building so our customer could resume business as normal.
